

Healthcare News and Deals - July 8th, 2025

1. Imagen AI's \$23M Series B Led by Larry Ellison with Aguras Pathology Brings Total Funding to \$45M

The AI-driven precision medicine platform integrates imaging, omics, and clinical data to enhance biomarker discovery and trial design, trained on 1.5 million biopsy images. Funding will expand partnerships, including with Tempus, to improve predictive assay accessibility. The adaptive system continuously updates with new data, delivering dynamic insights for clinicians and researchers across therapeutic areas. ([Link](#))

2. Restore Medical's \$23M Series B Fuels Heart Failure Device Development with Pitango, EIC Fund & Peregrine Ventures

The funding will advance clinical trials for a minimally invasive heart failure device, following FDA Breakthrough Designation. Targeting HFrEF patients, the therapy aims to improve cardiac function and reduce hospitalizations, with early data showing promise in reversing ventricular remodeling. Investors support the innovation as heart failure remains a global leading cause of mortality. ([Link](#))

3. Ingenio Care secures Pre-Seed Funding to Launch AI-Powered Digital Health Network for IPAs, Employers & Health Plans

The startup is building an AI-driven healthcare platform that matches patients with providers in real-time while improving care coordination and cost transparency. Designed to reduce wait times by 30-50%, the system optimizes provider capacity and maintains patient records across insurance changes. Early pilots will assess its impact on access, continuity, and administrative efficiency. ([Link](#))

4. Sensifai Health Secures Seed Funding from Glen Ventures & Eurêka for AI-Powered Pre-Symptom Inflammation Detection

The biotech startup's AI platform detects inflammatory responses via wearables before symptom onset, potentially preventing 50% of COPD hospitalizations. With applications in chronic and infectious diseases, the technology enables preemptive care without additional hardware. The funding will accelerate commercialization of this validated approach, which originated from academic research and addresses healthcare's reactive care gap. ([Link](#))

5. Biorce secures €5M from Norrsken VC, YZR Capital & Mustard Seed Maze to Transform Clinical Trials with AI

The AI-powered platform predicts trial delays and optimizes protocols, already cutting oncology and neurology study timelines by 25% and amendments by 50%. Founded by industry experts, the startup has expanded to the UK and Nordics, with U.S. market entry planned. Funding will support product development amid growing demand in the \$150B clinical research sector. ([Link](#))

6. MediShout raises £6.6M Series A Led by Heal Capital with Nickleby Capital & Meridian Health Ventures for Hospital Operations Platform

The hospital operations platform centralizes equipment reporting and maintenance, reducing surgery cancellations by 44% and cutting resolution times by 4.5 hours per incident. Currently deployed in UK hospitals, the solution integrates with existing IT systems. Funding will fuel European expansion and US entry while enhancing the product, following a £3.66M seed round in 2023. ([Link](#))

7. Cumulus Neuroscience secures £3.25M from Whiterock, Clarendon, ACF & Co Fund NI for At-Home EEG Platform

The digital health platform combines dry-sensor EEG with cognitive testing for remote neurological monitoring in conditions like Alzheimer's. Developed with biopharma partners, it enables at-home brain function assessments to improve clinical trial data quality and accessibility. Funding will drive commercialization and team growth, addressing limitations of traditional clinic-based neurological evaluations. ([Link](#))

8. BLOOM⁴³ by Plexāā secures \$4.5M with TCP Health Ventures, THENA Capital, and NIHR for U.S. Breast Surgery Device Launch

The wearable medical device enhances blood flow to reduce complications in breast surgeries, with plans to expand into other surgical applications. The funding will support U.S. market entry and platform development, bringing total funding over \$7 million. Investors highlighted its potential to improve surgical outcomes, particularly in women's health. A Series A round is planned. ([Link](#))

9. Luma Fertility secures \$4M Seed Funding from Peak XV's Surge to Transform Indian Reproductive Care

The fertility startup combines advanced clinic services with digital tools like an IVF management app and AI-powered tracking to improve reproductive care. Offering IVF, assessments, and cryopreservation, it addresses gaps in India's fertility market. Funding will fuel expansion across major cities to meet growing demand for tech-enhanced, patient-centric fertility solutions. ([Link](#))

10. LeoMed secures \$2.75M Seed Round Led by Precicom with Investissement Québec for Telehealth Monitoring Platform

The no-code telehealth platform aggregates real-time patient data from medical devices and wearables, helping healthcare teams prioritize care and reduce rehospitalizations. Currently used in Québec hospitals, the solution addresses clinician burnout while complying with privacy regulations. Funding will expand the team, enhance AI capabilities, and support growth beyond the province. ([Link](#))

Events:

1. August 12 - 13th Healthcare Technology & AI Transformation Assembly

The Healthcare Technology & AI Transformation Assembly, August 12-13 in Atlanta, connects C-suite healthcare executives to discuss AI-driven transformation. The assembly features

expert panels, strategic discussions, and networking focused on patient analytics, predictive modeling, and digital innovation, empowering leaders to drive impactful change in healthcare organizations. ([Link](#))

2. August 15 - 16th Machine Learning for Healthcare (MLHC) Conference

MLHC Conference, August 15-16 in Rochester, Minnesota, gathers computer scientists, clinicians, and researchers to advance machine learning in healthcare. The event includes talks, panels, and poster sessions, fostering interdisciplinary collaboration and innovation to improve medical data analysis, clinical decision-making, and patient outcomes through cutting-edge AI research.
